Eustream Daily Briefing — European Gas Market (30 Apr 2026)

1. CRITICAL ALERTS

[1] Disruptions to LNG supplies from the Middle East caused by the closure of the strait of Hormuz equate to around 200 cargoes that have not been delivered.

[2] US gasoline prices have been rising, averaging \$4.12/USG for regular grade in the week ending on 27 April, as global markets price in the potential for further escalation in the war in Iran and a possible blockade in the strait of the Hormuz that lasts for months .

[3] It's all over the place." Democrats have accused the administration of stumbling into the Iran war without having an idea of what to do if Tehran closed the strait of Hormuz, through which about 20pc of global oil flows.

2. TRANSIT & FLOWS

[4] No transit updates.

3. PRICES

[5] No price commentary available.

4. SUPPLY & LNG

[6] A more open inter-basin arbitrage in summer could push European injections to later this year, should Europe lose more cargoes to Asia during peak summer.

[7] Taiwan's March LNG imports at 2.1mn t were little changed on the year, but included its most expensive single cargo purchase since 2021-23, customs data show.

[8] Taiwan's near-term LNG imports may remain firm to meet the sustained call on gas-fired units, given limited alternatives for power generation.

[9] Adnoc may also have more of a risk appetite for transits with old steam turbine carriers, traders said, citing the laden transit of the 137,000m³ Mubaraz earlier this month — the first LNG cargo to exit the Mideast Gulf since the war began.

5. STORAGE

[10] The open arbitrage for loadings as far out to September has also increased the risk for low EU-wide underground storage levels ahead of winter.

[11] The NBP September market closed at 112.74p/th on Thursday, down from 115.50p/th at the previous close. The NBP September market was at a 0.085p/th discount to the NBP front-month price, in from a 0.13p/th discount at the previous close.

[12] Storage levels at the 26,000TJ Iona underground gas storage facility in Victoria continued to stand at 103pc since 24 April.

[13] Ukraine plans to increase gas storage tariffs from June — Ukrainian energy regulator NEURC plans to raise tariffs for injection, storage and withdrawal services levied by state-owned gas storage operator Ukrtransgaz from 1 June.

6. GEOPOLITICAL & REGULATORY

[14]Iran's assertion of control over Hormuz resulted in a fragile truce with the US and Israel earlier this month.

[15]Market participants are increasingly expecting a tighter global balance in summer as there has been little progress towards a resolution between the US and Iran, further delaying expectations for a restart to flows via the strait of Hormuz.

[16]Repsol's refining margin in Spain jumped to \$10.90/bl in January-March, from \$5.30/bl a year earlier on the back of widening middle-distillate crack spreads in March following attacks on Iran and the effective closure of the strait of Hormuz.

[17]Additionally, tensions between the US and Iran has once again escalated as President Donald Trump and key cabinet members discussed the possibility that the blockade on the strait of Hormuz might remain for "months" during a meeting with energy executives on 28 April.

7. INFRASTRUCTURE

[18]"We are working on a natural gas pipeline to northern Cyprus," Bayraktar said, without detailing capacity or timing. Turkey has yet to make a commercial gas discovery in the Mediterranean, despite drilling nine deepwater wells, Bayraktar said.

[19]Tariffs for interruptible capacity at other interconnection points would remain unchanged. Users would receive compensation if interruptions occur.

[20]Quite clearly, countries know that we are in interconnected energy system. Singapore remains one of the major oil refining and oil trading hubs in this part of the world — not just for southeast Asia, but for Asia.

8. MARKET OUTLOOK

[21]"We could possibly see, from here, inventory draws really start to accelerate." The company lowered its outlook for global oil demand growth to flat compared with last year.

[22]Maximum temperatures are forecast to be similar to a week ago at a very comfortable range of 25-26°C.

[23]Drivers for Repsol's short-term production include resuming control of upstream crude assets in Venezuela, where the firm is aiming to increase crude production by 50pc by early 2027, and Libya's El Sharara field, where Repsol holds a 20pc stake and is the operator of the Akakus joint venture with NOC.
